BID CLARIFICATIONS

Please see the following clarifications to this bid and answers to bidder questions:

1. Q: Are there plans or maps showing the locations of the lines? A: An aerial map with piping lines overlay was provided with the RFP.

2. Q: What are the access points for cleaning and camera insertion? We typically see lines with small cleanouts up the landfill on these type of sites. A: Cleanouts.

3. Q: What are the working hours? A: Monday-Friday 7:00 to 4:00 and Saturday 8:00-12:00.

4. Q: Will you extend the completion time another 30 days? This is a very tight completion time for 40,000 lf of pipe. A: For the past two services, its taken 2 weeks and at this point we are on a very tight end-of-year deadline with the State.

5. At what intervals (distance in LF) are the access points? A: See map provided.

6. Q: Item 3 “Vacuum Sump Areas” - what are they, how large? Picture or detail of one? A: Two of the four sump “vaults” are needing to be vacuumed out. Unable to provide picture or detail at this point.

7. Q: Are there any previous videos showing the size of the fusion weld projections into the 6” pipe interior? A: No. All welds have been able to be accessed over using standard jetting and camera equipment in the past.
8. Q: Are there any minimum length requirements for cleaning and CCTV of the long runs? Limitations of the equipment can prevent full travel to the midpoint of the longest runs. **A: We request that everything be attempted, and if unable to be completed, give us a detailed report as to why.**

9. Q: Are there any COs for the 8” perf. pipe in the NE portion of Cell 5? Will the pipe be required to be cleaned and CCTV if access to either end is not available? **A: Yes, see above.**

10. Q: Will there be any facility to dewater the decanted solids produced by vacuuming prior to disposing at the working face area? **A: No.**

Please be sure to include a signed copy of this addendum with your bid!
