

Winston-Salem/Forsyth County
Utilities is governed by the WSFC
Utility Commission, which meets on
the second Monday of each month
at 2 p.m. in City Hall, Room 230, 101
N. Main Street, Winston-Salem, NC.
For questions about this report or the
quality of our drinking water, call City
Link 311 or 336-727-8000.

CITY OF WINSTON-SALEM

Mayor: Allen Joines; City Council: Vivian H. Burke, Mayor Pro Tempore, Northeast Ward; Denise D. Adams, North Ward; Dan Besse, Southwest Ward; Robert C. Clark, West Ward; John C. Larson, South Ward; Jeff MacIntosh, Northwest Ward; Annette Scippio, East Ward; James Taylor Jr., Southeast Ward;

City Manager: Lee D. Garrity

FORSYTH COUNTY

County Commissioners: David R.
Plyler, Chair; Don Martin, Vice Chair;
Fleming El-Amin; Ted Kaplan; Richard
V. Linville; Tonya D. McDaniel; Gloria
D. Whisenhunt;
County Manager: Dudley Watts, Jr.

WSFC UTILITY COMMISSION

Randall S. Tuttle, Chair; L. Wesley Curtis, Jr., Vice Chair; Harold E. Day; Tom Griffin; Yvonne H. Hines; Duane Long; Hugh W. Jernigan; Chris Parker; James Ruffin; Donald R. Stewart; Allan Younger

Winston-Salem/Forsyth County Utilities drinking water meets all water quality standards

Winston-Salem/Forsyth County Utilities operates three water treatment facilities drawing water from both the Yadkin River and Salem Lake. Together, these water treatment facilities can produce up to 91 million gallons per day of drinking water. The Neilson and Swann Water Treatment Plants can treat 48 and 25 million gallons per day, respectively, from the Yadkin River. The Thomas Water Treatment Plant can treat 18 million gallons per day from Salem Lake and the Yadkin River.

For 2019, as in previous years, these treatment facilities have met or surpassed all state and federal standards for drinking water quality. This accomplishment reflects the quality and dedication of the employees who work year-round to provide adequate supplies of safe drinking water.

This report includes details about the sources of your drinking water, how it is treated, what it contains, and exactly how it compares to state and federal standards. We provide this updated information annually because we are committed to delivering top-quality drinking water to our customers.

Protecting Our Water Sources

Sources of both tap and bottled drinking water include rivers, lakes, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material. Water can also pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

 Microbial contaminants, such as viruses and bacteria, which may come from wastewater treatment plants, septic systems, agricultural livestock operations, and wildlife.

- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or wastewater discharges, oil and gas productions, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants which can be naturally occurring or the result of oil and gas production and mining activities.

To ensure that tap water is safe to drink, the Environmental Protection Agency limits the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at 800-426-4791.

Lead Exposure from Water

Elevated levels of lead in drinking water can cause serious health problems, especially for pregnant women and young children. Lead in drinking water comes primarily from materials and components associated with service lines and home plumbing.

Winston-Salem/Forsyth County Utilities is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking.

If you are concerned about lead in your water, you may wish to have your water tested by calling City Link311 (336-727-8000). Information and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 800-426-4791 or epa.gov/safewater/lead.

Treated Water Quality

The following substances were detected in Winston-Salem/Forsyth County public water supply during the 2019 calendar year.

Regulated at the Treatment Plant					
Substance	Highest Level Allowed (EPA's MCL¹)	ideai Goals (EPA's MCLG²)	Range of Detections	Average Level Detected	Source
Barium, ppb ⁴	2000	2000	13.0 - 19.0	16.0	Natural geology; drilling operations; metal refinery wastes
Thallium, ppb	2.0	0.5	ND - 1.0	<1.0	Leaching from ore-processing sites; discharge from electronics
					glass and drug factories
Fluoride, ppm ⁵	4.0^{6}	4.0	0.31 - 0.97	0.77	Erosion of natural deposits; water additive to promote strong teet
Orthophosphate, ppm	0.5 - 5.0	1.0	0.67 - 0.98	0.85	Water treatment additive to prevent pipe corrosion
Total Organic Carbon, ppm	Treatment Technique ⁷	n/a	0.60 - 1.57	0.94	Naturally present in the environment
Turbidity, NTU ⁸	Treatment Technique ⁹	n/a	0.01 - 0.21	0.05	Soil erosion
Regulated in the Distribution System					
Total Trihalomethanes, ppb	80 LRAA ¹⁰	0.0	12.2 - 72.0	41.4	Byproducts of drinking water disinfection
Total Haloacetic Acids (5), ppb	60 LRAA ¹⁰	0.0	13.9 - 44.7	28.7	Byproducts of drinking water disinfection
Chlorine, ppm	4.0	4.0	0.03 - 1.72	0.94	Water treatment additive for disinfection
Orthophospate, ppm	0.25 - 1.50	1.0	0.76 - 0.95	0.84	Water treatment additive to prevent pipe corrosion
Total Coliforms	Less than 5% positive	0.0	0.0	0.0	Naturally present in the environment
Unregulated Substances at the Treatment Plant - Point of Entry					
Geosmin, ppt ³		Not Regulated	2.5 - 9.9	4.7	Byproduct of algae growth
2-methylisoborneol, ppt		Not Regulated	ND - 10.6	3.9	Byproduct of algae growth
Unregulated Substances at the Treatment Plant - Source Water					
Geosmin, ppt		Not Regulated	2.1 - 9.1	4.6	Byproduct of algae growth
2-methylisoborneol, ppt		Not Regulated	ND - 71.9	16.4	Byproduct of algae growth
Regulated at the Consumer's Tap					
Lead, ppb	15.0 (action level ¹¹)	0.0	ND - 16.0	<1.0	Corrosion of household plumbing; erosion of natural deposits
Copper, ppb	1300.0 (action level")	1300.0	ND - 129.0	29.0	Corrosion of household plumbing; erosion of natural deposits

DEFINITIONS:

ND = Not detected

 $^{^{\}rm 1}$ Maximum Contaminant Level (MCL) - The highest level of a contaminant that is allowed in drinking water.

² Maximum Contaminant Level Goal (MCLG) - The level of a contaminant in drinking water below which there is no known or expected risk to health.

³ ppt - One part per trillion. - (For example, one penny in \$10,000,000,000.)

⁴ ppb - One part per billion. - (For example, one penny in \$10,000,000.)

⁵ ppm - One part per million. - (For example, one penny in \$10,000.)

⁶ The EPA's maximum contaminant level for fluoride is 4.0 mg/L, however the State of North Carolina has established a maximum contaminant level of 2.0 mg/L.

⁷ Treatment technique - Treatment technique for total organic carbon was complied with throughout 2019.

⁸ NTU - nephelometric turbidity unit, a measure of the cloudiness of water.

 $^{^9}$ Treatment technique - 95% of the measurements taken in one month must be below 0.3 NTU. Turbidity treatment technique was complied with throughout 2019.

¹⁰ Locational running annual average - average of last four quarters of samples collected at each location at 12 monitoring sites.

¹¹ Action Level - The concentration of a contaminant that triggers treatment or other requirement that a water system must follow. Action levels are reported as the 90th percentile, which is the concentration that 90 percent of the locations sampled falls below. In 2019, our 90th percentile values were lead <3.0 and copper 0.56 ppb.

Physical & Mineral Characteristics - Calendar Year 2019

CONSTITUENT	ANNUAL RANGE DETECTED	ANNUAL AVERAGE
Alkalinity, ppm	12.5 - 28.5	21.2
Aluminum, ppm	0.007 - 0.025	0.011
Calcium, ppm	3.02 - 5.52	3.90
Carbon Dioxide, ppm	1.50 - 8.00	3.50
Chlorine, ppm	1.06 - 1.99	1.44
Conductivity, micromhos,	/cm 77.2 - 112.4	94.4
Copper, ppm	ND - 0.008	0.002
Hardness, ppm	10.0 - 26.0	17.9
Magnesium, ppm	1.15 - 1.74	1.44
Manganese, ppm	ND - 0.003	< 0.001
pH, Standard Units	6.80 - 8.90	7.52
Phosphate, ppm	0.74 - 1.32	0.89
Potassium, ppm	1.21 - 3.03	1.77
Silica, ppm	3.80 - 19.49	9.74
Sodium, ppm	7.20 - 12.30	9.60
Temperature, Deg. C	4.0 - 36.4	20.4
Zinc, ppm	0.174 - 0.291	0.218

ND = Not detected

Cryptosporidium sp. - This is a microscopic organism that, when ingested, can cause diarrhea, fever and other gastrointestinal symptoms. The organism occurs naturally in surface waters (lakes & streams) and comes from animal waste. Cryptosporidium sp. is eliminated by an effective treatment combination of coagulation, sedimentation, filtration and disinfection.

We have completed two rounds of 24-month sampling at all of our water sources and have not detected any cryptosporidium. In addition, Cryptosporidium sp. has never been detected in our treated drinking water.

Special Concerns - Some people may be more vulnerable to contaminants in drinking water than the general population. People whose immune systems have been compromised – such as people undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants – can be particularly at risk for infections.

These people should seek advice about drinking water from their health care providers. Environmental Protection Agency and Centers for Disease Control guidelines on appropriate means to lessen risk of infection by Cryptosporidium sp. and other microbiological contaminants are available from the Safe Drinking Water Hotline at 800-426-4791.

En Español - Si desea recibir una copia de este reporte en Español o si tiene preguntas con respecto a la calidad del agua que consume, por favor comuniquese con el departamento the servicios públicos durante las horas de trabajo, el teléfono es 336-727-8000 o visite CityofWS.org/wqr19espanol.

North Carolina Source Water Assessment

The North Carolina Department of Environmental Quality (DEQ), Public Water Supply (PWS) Section, Source Water Assessment Program (SWAP) conducted assessments for all drinking water sources across North Carolina. The purpose of the assessments was to determine the susceptibility of each drinking water source (well or surface water intake) to Potential Contaminant Sources (PCSs). The results of the assessment are available in SWAP Assessment Reports that include maps, background information and a relative susceptibility rating of Higher, Moderate or Lower.

The relative susceptibility rating of each source for the City of Winston-Salem (PWSID 0234010) was determined by combining the contaminant rating (number and location of PCSs within the assessment area) and the inherent vulnerability rating (i.e., characteristics or existing conditions of the well or watershed and its delineated assessment area). The assessment findings are summarized in the table below:

Source Name	Inherent Vulnerability Rating	Contaminant Rating	Susceptibility Rating
SALEM LAKE	Moderate	Higher	Higher
YADKIN RIVER (IDOLS DAM)	Higher	Moderate	Higher
YADKIN RIVER (PW SWANN WTP*)	Higher	Lower	Moderate

Table 2 of SWAP Report for Winston-Salem, September 5, 2017

* Water Treatment Plant (WTP)

The complete SWAP Assessment report for the City of Winston-Salem may be viewed on the Web at: ncwater.org/?page=600. Please indicate your system name (Winston-Salem, City of) and number (0234010).

Note that because SWAP results and reports are periodically updated by the PWS Section, the results available on this web site may differ from the results that were available at the time this report was prepared.

If you are unable to access your SWAP report on the web, you may mail a written request for a printed copy to:

Source Water Assessment Program – Report Request,
1634 Mail Service Center, Raleigh, NC 27699-1634,
or email requests to swap@ncdenr.gov.

Please indicate your system name (Winston-Salem, City of),

Please indicate your system name (Winston-Salem, City of), number (0234010), and provide your name, mailing address and phone number.

If you have any questions about the SWAP report please contact the Source Water Assessment staff by phone at 919-707-9098.

It is important to understand that a susceptibility rating of "higher" does not imply poor water quality, only the system's potential to become contaminated by PCSs in the assessment area.

Unregulated Contaminant Monitoring Rule

The Safe Drinking Water Act (SDWA) Amendments of 1996 established the Unregulated Contaminant Monitoring Rule (UCMR) that requires the US Environmental Protection Agency (EPA) to issue a list of no more than 30 unregulated contaminants to be monitored by all large public water systems (PWSs) serving over 10,000 customers and a representative sample of small PWSs. The UCMR requires the EPA to develop a Contaminant Candidate List (CCL) every five years. Unregulated contaminants are those for which EPA has not established drinking water standards.

The purpose of unregulated contaminant monitoring is to assist the EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted. The UCMR also requires the EPA to store and maintain a database of analytical results gathered through each UCMR sampling cycle called the National Contaminant Occurrence Database (NCOD).

For this fourth cycle of the UCMR (called UCMR4), Winston-Salem/Forsyth County Utilities collected samples at our three water treatment plants and in our distribution system from July 2018 through June 2019.

Under the UCMR4 we are required to sample our source water for 10 cyanotoxins, bromide and organic carbon. Cyanotoxins are algae produced by products which have potentially toxic impacts. Our system has completed all the required cyanotoxin sampling and did not have any detections in our source water. Bromide and organic carbon contribute to disinfection by-product formation. In addition, we have sampled for 20 additional compounds which include two metals, nine pesticides, three alcohols, three semivolatile chemicals and three brominated haloacetic acids (HAA9s). The table below contains all detections of our UCMR4 sampling to date.

AT THE TREATMENT PLANT POINTS OF ENTRY Manganese, ppb ND - 2.60 0.54 AT THE TREATMENT PLANT SOURCE WATERS Total Organic Carbon, ppm 1.08 - 3.15 IN THE DISTRIBUTION SYSTEM Total HAA9s, ppb 13.3 - 25.9 19.0

I۱۱	THE DISTRIBUTION SYSTEM		
	Total HAA9s, ppb	13.3 - 25.9	19.0
	Monochloroacetic Acid, ppb1	ND	ND
	Dichloroacetic Acid, ppb1	4.8 - 11.0	7.4
	Trichloroacetic Acid, ppb1	5.4 - 12.0	8.5
	Monobromoacetic Acid, ppb1	ND	ND
	Dibromoacetic Acid, ppb1	ND	ND
	Bromochloroacetic Acid, ppb ²	1.3 - 2.4	1.8
	Bromodichloroacetic Acid, ppb ²	1.0 - 1.8	1.4
	Chlorodibromoacetic Acid, ppb ²	ND - 0.3	ND
	Tribromoacetic Acid, ppb ²	ND	ND

¹ Currently regulated as HAA5s

ND = Not detected

NOTICE TO THE PUBLIC

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER WINSTON-SALEM. CITY OF HAS NOT MET MONITORING REQUIREMENTS

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the compliance period specified in the table below, we did not complete all monitoring or testing for the contaminants listed and therefore cannot be sure of the quality of your drinking water during that time.

CONTAMINANT Group	FACILITY ID NO./ Sample point ID	COMPLIANCE PERIOD BEGIN DATE	NUMBER OF Samples/Sampling Frequency
ENTRY POINT RESIDUAL DISINFECTANT CONCENTRATION	WP1/EP1 (THOMAS WTP)	NOVEMBER 2019 AND DECEMBER 2019	CONTINUOUS MONITORING

When samples were or will be taken: Continuous monitoring was resumed on December 6, 2019.

What should I do? There is nothing you need to do at this time.

What is being done? Chlorine is added to drinking water to kill harmful bacteria. The amount that remains in water can be measured and is called chlorine residual. The laws governing public systems require our water plants to constantly monitor and record the chlorine residual at the point of entry (POE) into the distribution system. During the period of November 12, 2019 to December 6, 2019 at the Thomas Water Treatment Plant the device that constantly monitors chlorine residual was left in "hold mode" and did not record the values as required. During this time, as is our normal standard operating practice, our operations staff manually tested this location every two hours and at no time did the chlorine residual drop below acceptable levels. Because this is considered a monitoring violation, we are required to notify you within 12 months of receiving the notice from the State of North Carolina. This incident did not jeopardize public health or the quality of water leaving the Thomas Plant.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

For more information, please contact:

Bill Brewer, Water Treatment Superintendent 336-397-7727 City of Winston-Salem, System Number: NC0234010

Violation Awareness Date: December 20, 2019

² Required HAA9 under UCMR 4
