

Weighted Score Sheet

There are six evaluation criteria by which each project is to be evaluated. Each criteria has a specific score weight. The criteria and their approved weightings are:

1	Improves service quality/quantity	30%
2	Reduces service cost	10%
3	Enhances or implements innovation	10%
4	Supports community partnership	10%
5	Improves economic, social or natural environment	20%
6	Urgency of need	20%

These criteria are described in more detail on the attachments. Each committee member should review the project descriptions and presentation information to determine their view as to how well each project satisfies the objective. The scoring will be from **zero** for a project that does not satisfy the criteria at all to **five** for a project that satisfies the criteria perfectly.

Once each member submits their category scores, staff will calculate the weighted score for the project. Once all member scores are calculated, staff will then calculate the Committee's average scores and rank the projects based on those scores.
