City Pleased
By One-Way
Street Plan

The Police Department has re-
viewed an upsurge of accidents
near West 87th Street and the
Hospital. The increased traffic
through the Hospital area has
resulted in accidents involving
bicycles and pedestrians.

The upsurge, according to
Chief Traffic Engineer Mr. Conk,
has been caused by the increase
in traffic at the Hospital area.

Mr. Conk suggested that
the Hospital area be made
one-way to reduce the acci-
dents. He stated that this
measure is necessary to
improve traffic conditions
in the area.

On the contrary, some
residents have expressed
concerns about the change.

Police Plan
Extra Signs
For Streets

New signs are re-
novation one-way
streets will be
installed within the
next two weeks.

Extra signs are neces-
sary to re-emphasize the
one-way status of the
streets, according to
Chief Traffic Engineer
Mr. Conk.

These signs will be
installed along the
streets to ensure
compliance with
the one-way rule.

Extra signs are
necessary to
prevent confusion
among drivers.

Extra signs will be
installed at the
corners of
the streets to
emphasize
the one-way
status.

These signs will
be installed
at the
corners of
the streets
for better visibility.

Extra signs will
be installed at
the entrance
of the streets
for clearer
signage.

Extra signs will
be installed at
the intersections
for improved
visibility.

Extra signs will
be installed at
the entrances
of the streets
for better
signage.

These signs will
be installed at
the entrances
of the streets
for improved
visibility.

Extra signs will
be installed at
the intersections
for better
signage.

for improved
visibility.
Traffic Speeds Doubled
By One-Way Street System

By MARIE HICKS

Three weeks ago, the city was asked to decide between a full-time one-way street system and a 24-hour system. The choice was difficult, but it was decided that a 24-hour system would be more satisfactory.

In the past, traffic on one-way streets has been slow. Now, with the introduction of a full-time one-way system, traffic speeds have doubled.

The benefits are clear. With fewer cars on the road, traffic moves more smoothly. Pedestrians can cross the street more safely. And the overall atmosphere is one of quiet and order.

The system has also improved the appearance of the city. With fewer cars, street lights are brighter and sidewalks are cleaner.

In conclusion, the one-way system is a wise choice for the city. It improves traffic flow, enhances safety, and enhances the overall appearance of the city.
