REQUEST

This UDO text amendment is proposed by the Inspections Division and the City County Planning Board to amend the UDO to reflect the addition of a definition for “Cul-de-sac lot” and revise building setback standards for such.

BACKGROUND

The UDO currently requires that buildings be set back a specific distance from the right-of-way or to a point where the minimum lot width of the underlying zoning district has been met. Typically this encourages a natural pattern of setbacks for houses on a residential street. However, because of the bulb shape of cul-de-sacs, the required width is often located far beyond the setback line of other lots and houses not located on a cul-de-sac bulb. This has led to a development pattern in which homes located on cul-de-sacs are not consistent with the setback of other homes in a subdivision. Additionally, it is often difficult for a developer to attain the required width without adding significant square footage to the cul-de-sac lot. This issue has been the subject of numerous requests for variances, which have been brought before the Zoning Board of Adjustment.

ANALYSIS

Planning staff generally encourages connectivity of streets and discourages the utilization of cul-de-sacs. Staff does however recognize that cul-de-sacs are appropriate and desirable in some situations due to topography and existing lotting patterns. Accordingly, staff has determined that a UDO definition for a cul-de-sac lot must be established, and dimensional requirements of such a lot clearly defined.

The same constraints that make a cul-de-sac a necessity in a development, steep terrain for example, can also hinder the developer from being able to meet the current width requirements for cul-de-sac lots. Streams and topographic issues can sometimes make it difficult for a lot to extend further back to meet width requirements and associated setback requirements in a manner, which maintains the character of the streetscape.

From a planning aspect, neighborhoods with cul-de-sacs can often have a disjointed appearance because of the forced increased front setback to meet width requirements. The proposed text amendment would allow more conventional setback requirements for cul-de-sac lots without the current width-related setback requirements. This would allow for a more balanced appearance of cul-de-sac lots with others in the neighborhood.
RECOMMENDATION

APPROVAL.

Glenn Simmons presented the staff report.
