ANALYSIS

The proposed rezoning consists of 37.63 acres to be rezoned from RS-9 to RM-8-S. The property will access Peters Creek Parkway via a new public street. There will be a mixture of public and private streets within the proposed development. A type III buffer zone is required adjacent to RS-9 zoned property.

This site meets the recommendations in the comprehensive plan, particularly in regard to providing a variety of housing and adequate infrastructure and services in the area. Peters Creek Parkway will be able to handle the additional trips generated by this use since it is proposed to be widened to a four-lane divided highway. Traffic generation figures also indicate less traffic to be generated from the proposed project than would be allowed under existing zoning. The project site is appropriate for the location of multifamily housing, which offers variety to housing opportunities in the county.

FINDINGS

1. The proposed rezoning consists of 37.63 acres to be rezoned from RS-9 to RM-8-S.
2. The property will access Peters Creek Parkway via a new public street.
3. This site meets the recommendations in the comprehensive plan.
4. The provision of multifamily housing offers variety to housing opportunities in the county.

*[For information purposes only: The draft Legacy plan indicates that the site is located in the Suburban Neighborhoods Area of the MSA (Metropolitan Statistical Area) where much of future residential, commercial and industrial development should occur (p. 19). One of the goals of the Growth Management Plan is higher development densities within the MSA particularly along proposed Urban Boulevards and at proposed Activity Centers. Peters Creek Parkway is a proposed Urban Boulevard. Multifamily residential development is therefore appropriate at this location (p. 22, 24).]*
